Supplementary Table 14. E-values computed using the Vander-Weele – Ding method (2017) for reperfusion variables

Variable	aOR	95% CI	E-value (point)	E-value (CI bound near null)
IV thrombolysis	0.79	(0.66–0.94)	1.50	1.21

aOR, adjusted odds ratio; IV, intravenous.
