
Supplementary Fig. 1. Cerebral microbleeds—component-level distribution and outcomes. (A) Log-transformed distribution of cerebral microbleed (CMB) count among CMB-positive patients; counts of zero- and positive-CMB patients are shown inset. (B) Three-month modified Rankin Scale (mRS) distribution stratified by CMB count tier (0, 1–4, 5–9, ≥10). (C) Outcome rates (good outcome, poor outcome, mortality) with 95% Wilson CIs by CMB count tier. (D) Receiver operating characteristic curves for poor outcome (mRS ≥3) under the clinical baseline alone (gray) and clinical plus CMB count (blue). AUC, area under the receiver operating characteristic curve.
