
Supplementary Fig. 2. Parenchymal hemorrhage—component-level distribution and outcomes. (A) Log-transformed distribution of parenchymal hemorrhage volume (mL) among hemorrhage-positive patients. (B) Three-month modified Rankin Scale (mRS) distribution stratified by hemorrhage volume tier (0, <0.5, 0.5–1.6, 1.6–10, ≥10 mL). (C) Outcome rates by tier. (D) Receiver operating characteristic curves for poor outcome under the clinical baseline alone (gray) and clinical plus hemorrhage volume (orange). SWI, susceptibility-weighted imaging; AUC, area under the receiver operating characteristic curve.
