
Supplementary Fig. 3. Cortical superficial siderosis (cSS)—component-level distribution and outcomes. (A) Log-transformed distribution of cSS volume (mL) among cSS-positive patients. (B) Three-month mRS distribution stratified by cSS volume tier (0, <0.5, ≥0.5 mL). (C) Outcome rates by tier. (D) ROC curves for poor outcome under the clinical baseline alone (gray) and clinical plus cSS volume (yellow). SWI, susceptibility-weighted imaging; mRS, modified Rankin Scale; AUC, area under the receiver operating characteristic curve.
