
Supplementary Fig. 4. Subgroup analysis—each susceptibility-weighted imaging (SWI) component versus poor outcome. Three-panel forest plot of adjusted odds ratios per 1 log unit of each SWI component (cerebral microbleed [CMB] count, blue; parenchymal hemorrhage volume, orange; cortical superficial siderosis [cSS] volume, yellow) for poor 3-month outcome (mRS ≥3), stratified by the same pre-specified subgroups shown in main Fig. 5. Models were adjusted for the full clinical baseline. Squares indicate point estimates; horizontal bars indicate 95% CIs. NIHSS, National Institutes of Health Stroke Scale; TOAST, Trial of ORG 10172 in Acute Stroke Treatment; LAA, large-artery atherosclerosis; SVO, small-vessel occlusion; CE, cardioembolism; AF, atrial fibrillation; OR, odds ratio.
