Supplementary Table 14. Hemorrhage vs microbleed positivity by imaging timing

Onset-to-imaging (hr)	Number	Hemorrhage+ (%)	Median hemorrhage+(mL)	CMB+(%) (chronic ref)
≤4.5	937	14.7	0.66	44.5
4.5–6	299	14.0	0.70	41.8
6–12	931	14.9	0.59	44.4
12–24	1,229	16.8	0.62	48.8
24–48	1,040	18.7	0.88	45.8
>48	1,688	19.4	0.96	46.1

Hemorrhage positivity rises modestly with later imaging, whereas microbleed (chronic-reference) positivity is flat, indicating a predominantly chronic hemorrhage signal.
CMB, cerebral microbleed
