Supplementary Table 15. THB–outcome association restricted to early-imaged patients

Subset	Number	Hemorrhage+	THB OR per SD (95% CI)	Hemorrhage OR per SD (95% CI)
All patients	6,124	1,046	1.19 (1.11–1.27)	1.18 (1.10–1.27)
Imaged < 6 hr from onset	1,178	171	1.41 (1.21–1.65)	1.28 (1.10–1.48)
Imaged < 4.5 hr from onset	879	129	1.49 (1.23–1.81)	1.32 (1.10–1.58)

The composite was rebuilt within each subset; all models adjust for the same clinical covariates. Odds ratios are per 1 SD. CIs widen in the smaller early-imaging subsets owing to reduced power.
THB, total hemorrhagic burden; OR, odds ratio; SD, standard deviation.
