Supplementary Table 7. Reclassification and integrated discrimination of the THB composite added to the clinical baseline

Outcome	Events	AUC (base → +THB)	Continuous NRI (95% CI)	IDI (95% CI)
Poor outcome (mRS ≥3)	1,518	0.825 → 0.828	0.164 (0.110 to 0.216)	0.0033 (0.0015 to 0.0053)
Mortality (mRS=6)	205	0.829 → 0.831	0.091 (–0.046 to 0.215)	0.0017 (–0.0019 to 0.0050)

Continuous NRI and IDI compare the clinical model with the clinical + THB composite model. 95% CIs from 1,000 bootstrap resamples.
THB, total hemorrhagic burden; AUC, area under the receiver operating-characteristic curve; NRI, net reclassification improvement; IDI, integrated discrimination improvement; mRS, modified Rankin Scale.
