Supplementary Table 9. Sensitivity of the THB and chronic-hemorrhage associations with outcomes to exclusion of large chronic hemorrhages

Scenario	N (excluded)	Events	THB OR per SD (95% CI)	Hemorrhage OR per SD (95% CI)
Primary (all patients)	6,124 (0)	1,518	1.19 (1.11–1.27)	1.18 (1.10–1.27)
Exclude Hemo ≥30 mL (n=13)	6,111 (13)	1,508	1.18 (1.10–1.26)	1.15 (1.07–1.24)
Exclude Hemo ≥10 mL (n=78)	6,046 (78)	1,468	1.17 (1.09–1.25)	1.14 (1.06–1.22)

The THB composite was rebuilt within each retained subset. All models adjust for the same clinical covariates; ORs are per 1 SD.
THB, total hemorrhagic burden; OR, odds ratio; SD, standard deviation.
